Better Automated Labelling - Please! Completed

- Joe Ponsford
- **Forum name:** #Suggestion

One of the areas that could do with improving are the automated labelling results.

If there are a vast amount of occlusions the data is unusable regardless if you attempt to manually label by hand and then re-run the automated labelling. It would be worth having a velocity labeller as I have seen it from some propriety systems that there are no swaps in the labelling regardless of how many occlusions occur.

The new solver in the upcoming release of Motive 3.0 does a much better job of auto-labeling.
