highlighted occluded marker names (in selected marker labeling list) Completed

- Andrew
- **Forum name:** #Suggestion

I'd like to see occluded marker names highlighted in the selected marker labeling list, so when I've got an unlabeled marker selected, I can choose Label Marker> and then see the highlighted markers in the list, to more quickly make the choice.

This would greatly reduce the time it takes to scan the list for the marker choice, on those occasions where it's a straightforward case of re-labelling.
