Motive Feature - Velocity Labeller Completed

- Joe Ponsford
- **Forum name:** #Suggestion

One of the most frustrating things about using Motive is the automated labeller we spend so much time in post due to the labelling results, particularly if we have many occlusions/lose a marker if the automated labeller was more velocity based then we shouldn't have to re-label markers if they were static on the before & after frame of the occlusion. If this could be improved it would be a big bonus :)

Thanks

Joe

The new solver in Motive 3.0 does a much better job labeling in general, particularly in difficult tracking cases.
